Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270 °C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK \triangle OR DOTTED LINE WITH MARK \triangle ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

Glasstron is a brand-new concept in visual display

Congratulations on your purchase of a Sony Glasstron Personal Viewer. The Glasstron, using current technology in small, lightweight visual displays, provides a television viewing experience similar to watching a 52-inch television from a distance of approximately 6.6 feet (2 m). (Viewing experience may differ according to individual perception.)

The Glasstron Personal Viewer creates an image through two separate liquid crystal displays, in close proximity to your eyes. To insure your safe use of the Glasstron, please become familiar with its basic operations, including proper fitting instructions, and be aware of any symptoms of eye fatigue or other discomfort you may experience.

WARNING

YOUR FAILURE TO FOLLOW THESE OPERATING INSTRUCTIONS MAY RESULT IN EYE FATIGUE, EYE IMPAIRMENT, OR OTHER EYE INJURY, PROPERTY DAMAGE OR DEATH.

WARNING

THIS PRODUCT SHOULD NOT BE USED BY CHILDREN AGE 15 OR YOUNGER. THE EYES OF CHILDREN ARE STILL DEVELOPING AND MAY BE ADVERSELY AFFECTED FROM USE OF THIS PRODUCT.

Note on the LCD (Liquid Crystal Display)

The LCD screen is made with high-precision technology. However, black points or bright points of light (red, blue, or green) may appear constantly on the LCD screen. This is not malfunction. (Effective dots: more than 99.99%)

About the Glasstron

Caution: The screen is always right in front of you.

The Glasstron is a head-mounted display. With this type of display, the screen is always in front of you even if you move your head. Because of this feature, you can concentrate on the screen more easily compared with ordinary TVs and you have a sense of being in the action.

- It is easy to adjust the Glasstron to your eyes. You can use the display unit even while wearing glasses.
- Every time you use the Glasstron, the adjustment screen appears to help you adjust the display unit properly. You can also check whether the left and right screen positions are properly aligned or not.
- Cautions appear on the screen about every two hours to remind you to check for eye fatigue. The power will automatically turn off if you do not press the SEL/PUSH EXEC jog dial. If you keep using the Glasstron continuously for six hours, a warning appears on the screen and the power will turn off automatically.

The Glasstron consists of the following items:

Features

- A powerful, big screen experience comparable to watching a 52-inch screen from approximately 6.6 feet (2 m) away.
- Handy portable folding display.
- Solid and lightweight components made of magnesium alloy with the display unit weighing only 5.3 oz (150 g).
- The see-through function allows you to see the surrounding environment even while wearing the Glasstron.
- You can use the Glasstron while wearing glasses.
- You can connect optional headphones to the headphones jack to enjoy the high quality sound.
- Approximate continuous use for up to 2 hours 20 minutes with Sony's recommended battery pack, NP-F550.

Checking the supplied accessories

Check that the following accessories are supplied with your Glasstron. If any item is not supplied, contact your Sony dealer or local authorised Sony service facility.

- Display unit/Power supply box (1)

- Sunshades (1 pair)

- AC power adapter AC-PLM2 (1)

- Mains lead (1) (AEP)

- Mains lead (1) (UK)

- Audio/video cable (special miniplug ↔ phono plug) (1)

- Audio/video cable (special miniplug ↔ special miniplug) (1)

- Carrying cases (2)

- Operating instructions

Getting Started

Locating the parts and controls

Refer to the pages indicated in parentheses () for details.

Display unit

Power supply box

Connecting the Glasstron

Connecting the video equipment

Connect a VCR, laser disc player, DVD player, or camcorder to the power supply box as shown below.

Getting Started

About the audio/video input jack

The audio/video input jack of the Glasstron is a special minijack, and the signal connections are aligned as shown on the right. This alignment may differ depending on the equipment.

continued

13-GB

Connecting the Glasstron (continued)

Notes

• Even if you use the supplied audio/video cable, the audio and video signals may not be carried to the Glasstron depending on the video source. In this case, contact your Sony dealer or local authorised Sony service facility.

• When you connect the Glasstron to the audio output jacks (phono jacks) of your video equipment, connect the Glasstron to both the right and left audio output jacks. If you connect the Glasstron to just one audio output jack, you will hear sound from only one of the stereo earphones.

Connecting the power source

Connect the AC power adapter AC-PLM2 (supplied) to mains. Do not connect the power source until all other connections are complete.

* You can connect an optional headphone set. When using an optional headphone set, the sound from the Glasstron earphones is muted.

14-GB

Wearing the Glasstron

WARNING

- Failure to properly fit the product (see "Proper Fit," page 8) each time may result in eye fatigue, eye damage, or loss of visual functions and may result in accident or injury.
- This product should not be used by children age 15 or younger. The eyes of children are still developing and may be adversely affected by use of this product, and it may cause eye fatigue, eye damage, or loss of visual functions. In addition, this product may not be adjusted to fit a child's head.

If you normally wear glasses while watching TV, you can use the Glasstron while wearing glasses.

1 Loosen the back strap.

- ① Press and hold the strap release buttons,
- ② Then, loosen the back strap in the direction of the arrows.

2 Put on the Glasstron.

Hold the front pad against your forehead and place the rear strap so it is fixed firmly around the back of your head.

3 Adjust the strap.

Adjust the strap after putting on the Glasstron. Make sure the strap is snug but comfortable.

continued

Getting Started

Wearing the Glasstron (continued)

4 Adjust the angle of the display unit.

While holding the front pad against your forehead, adjust the angle of the display unit using the two hinges. Move the display unit close to your eyes at a slight downward angle. If you wear glasses, move the display unit as close to the lenses as possible.

5 Adjust the stereo earphones.

Pull the earphones out. To adjust the slack, reel in the earphone cord by pressing the slide button in the direction of the arrow.

Adjusting the back strap

If the strap does not fit properly in step 3, adjust the strap by changing the belt length.

Attaching the sunshades

You can attach the supplied sunshades if you like. The sunshades prevent the LCD screen from reflecting light that may interfere with the picture. Attach the sunshades on the right and left sides of the display unit by inserting the tabs on the sunshades into the holes on the display unit in the order illustrated below.

Turning on the Glasstron

After you complete all of the connections and put on the Glasstron properly, turn on the Glasstron and follow the procedures below.

- ① Checking the display unit position → This page
 - ② Checking the screen position alignment → Pages 19 through 21
 - ③ Setting a password → Page 22
- If you do not want to use a password, you have to set the Glasstron to operate without using a password in "Setting the password."

Checking the display unit position

Every time you turn on the Glasstron, the adjustment screen appears to help you adjust the display unit properly. Adjust the display unit following the procedure below.

Getting Started

1 Turn on the Glasstron using the POWER switch.

The POWER lamp lights up.

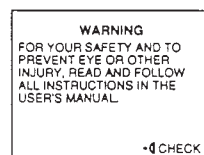

Screen

2 Turn the SEL/PUSH EXEC jog dial to select the desired language, then press the jog dial.

3 Read the WARNING and press the jog dial.

continued

Turning on the Glasstron (continued)

4 Read the next WARNING and press the jog dial.

5 Adjust the display unit so that you can see an asterisk (*) in each of the four corners as shown below.

•CHECK

Getting Started

Checking the screen position alignment

WARNING

Each time this product is used, adjustment screens will appear, requiring the viewer to properly fit the product. Proper fit means that an asterisk (*) will appear in each corner of the display. To prevent eye damage, do not use this product if the vertical lines do not cross the horizontal line on the next screen.

The Glasstron includes two small (left and right) LCDs. You are watching a combined picture created from these two screens. Although the screen position is properly aligned at the factory, it may become misaligned if the Glasstron is deformed or damaged. Check the screen position alignment every time you turn on the Glasstron. If you cannot have correct screen alignment, stop using the Glasstron immediately.

1 Press the SEL/PUSH EXEC jog dial.

continued

Turning on the Glasstron (continued)

2 If the screens are aligned, press the jog dial.

If the image you see matches one of the pictures below, you have correct screen alignment.

If the image you see matches one of the pictures below, stop using the Glasstron immediately. Use of the Glasstron under such conditions may cause eye fatigue or eye damage.

If you cannot see a proper arrangement of these lines even after resting your eyes for a few hours, the Glasstron may not be operating correctly. Contact your Sony dealer or local authorised Sony service facility.

Read the WARNING and press the jog dial.

The password "YES or NO" screen appears.

WARNING
MISUSE OR OVERUSE OF THE PRODUCT MAY RESULT IN EYE FATIGUE OR EYE DAMAGE. STOP USING IF YOU FEEL TIRED OR EXPERIENCE HEADACHES OR DISCOMFORT. SEE THE USER'S MANUAL FOR DETAILS. •• CHECK

DO YOU WISH TO SET A THREE NUMBER PASSWORD?
▶ YES
▶ NO
SEE THE USER'S MANUAL FOR DETAILS.
•• SEL •• EXEC

Go to "Setting the password" on page 22.

Getting Started

Setting the password

WARNING

This product should not be used by children age 15 or younger. The eyes of children are still developing and may be adversely affected by use of this product. To prevent such use, this product has been equipped with a safety password protection system. Please use a secure password if children age 15 or younger may have access to this product.

Once you set a password, you have to input the password every time you use the Glasstron. Do not forget your password. If you like, you can set the Glasstron to operate without a password.

Before you start...

Follow the procedure in "Turning on the Glasstron" (pages 17 through 21). The password "YES or NO" screen appears on the screen.

1 Select whether to set a password or not using the SEL/PUSH EXEC jog dial.

If you need to set a password, select YES. If not, select NO by turning the jog dial. Then press the jog dial. If you do not need to set a password, go to step 4 in "Using the Glasstron" (page 25).

Screen

DO YOU WISH TO SET A THREE NUMBER PASSWORD?
▶ YES
▶ NO
SEE THE USER'S MANUAL FOR DETAILS.
•• SEL •• EXEC

ENTER THE FIRST NUMBER.

•••

•• SEL •• EXEC

2 Enter a three digit password number, one by one, by using the jog dial.

Turn the jog dial to enter the first number, then press the jog dial. Enter the second and third numbers in the same way.

ENTER THE THIRD NUMBER.

•123•

•• SEL •• EXEC

Entered password

Verify a password using the jog dial.

If the password is correct, select YES by turning the jog dial. If not, select NO. Then press the jog dial.

If you select NO, return to step 1.
If you select YES, go to step 4 in "Using the Glasstron" (page 25).

Getting Started

Changing the password

When the power is on, press RESET with a pointed object such as a ballpoint pen.

- If you have already read the WARNING messages (pages 17 through 21) (for example, while watching a video picture), the display will return to step 1 in "Setting the password" (page 22).
- If you have not yet finished reading the WARNING messages (for example, you have forgotten your password), the display will return to step 3 in "Turning on the Glasstron" (page 17).

If you need to set a password after having set the Glasstron to operate without a password, follow the same procedure above.

Note

Pressing the RESET button does not affect picture or sound adjustments.

Using the Glasstron

You need to set a password the first time you use the Glasstron or after you reset the Glasstron. Set the password following the procedure in "Setting the password" (pages 22 and 23).

Before you start...

Be sure to follow the procedures in "Connecting the Glasstron" (page 13) and "Wearing the Glasstron" (page 15).

Turn on the Glasstron using the POWER switch, then press the SEL/PUSH EXEC jog dial.

Change the display language before pressing the jog dial, if necessary.

Screen

If you have set the Glasstron to operate without a password, go to step 3.

Turn the jog dial to enter the first number of your password, then press the jog dial. Enter the second and third numbers in the same way.

Entered password

If you enter a wrong password, the message shown on the right appears. Enter the correct password.

Wrong password

If you have entered a wrong password more than five times, after about ten seconds, the Glasstron turns off automatically.

Follow the instructions on the screen.

- ① Warning message → Follow steps 3 through 7 in "Checking the display unit position" (pages 17 through 19).
 - After carefully reading the warnings and checking the display unit position, press the jog dial.
- ② Screen alignment page → Follow steps 1 through 3 in "Checking the screen position alignment" (pages 19 through 21).
 - Read the warning carefully, and press the jog dial.
 - Make sure the left and right screens are aligned, and press the jog dial.

4

Start playback on the video equipment connected to the Glasstron.

5

Adjust the volume by turning the VOL control.

When you set AVLS in the MENU to on, you cannot turn up the volume beyond the defined limit (see page 30).

Operations

After you finish using the Glasstron

Take off the Glasstron, and turn off the power.

Note on the LCDs

The LCD screen is made with high-precision technology. However, black points or bright points of light (red, blue, or green) may appear constantly on the LCD screen. This is not malfunction. (Effective dots: more than 99.99%)

Checking the display indication

Press the jog dial while the picture is displayed. The display indication appears on the screen for five minutes. To turn off the indication immediately, press the jog dial again.

* When using the AC power adapter, the " " mark appears on the screen.

continued

25 GB

Using the Glasstron (continued)

Screen warnings against overuse of the Glasstron

To prevent eye fatigue or eye damage, after you use the Glasstron for a fixed length of time, the following caution appears on the screen.

After about 2 hours and 15 minutes of use

Stop using the Glasstron if you feel tired or you experience headaches or discomfort. If you want to continue using the Glasstron, press the jog dial.

After about 4 hours and 15 minutes of use

Stop using the Glasstron if you feel tired or you experience headaches or discomfort. If you want to continue using the Glasstron, press the jog dial.

Note

If you do not press the jog dial when the cautions above appear on the screen, the Glasstron turns off automatically in both cases.

After about 6 hours of use

The power turns off automatically.

Caution: Motion sickness from viewing programmes.

Some viewers may experience motion sickness, headache or nausea from viewing movies or video programmes, especially those with intense action and movement. If you feel any of these symptoms, stop using the product immediately. To avoid personal injury or injury to others, do not drive a car or motorcycle, nor do anything that requires concentration until the symptoms disappear.

Caution: Motion sickness from external motion.

Do not use the product while subject to external motion — for example, as a passenger in a car. Use of this product under these conditions may cause motion sickness.

Viewing the surrounding environment (See-through)

While you are wearing the Glasstron, you can view the surrounding environment through the screen by opening the shutter in the display unit.

Turn the SHUTTER switch to OPEN.

The picture becomes transparent.

The area surrounding the picture also becomes transparent.

Operations

Adjusting the sound and picture

You can adjust the following items using the menu display. The menu is displayed only in English.

BRIGHTNESS: Adjusts the picture brightness.

COLOUR: Adjusts the colour intensity.

MEGA BASS: Creates a deep, powerful sound by emphasising the bass sound.

SURROUND: Gives presence to the sound.

AVLS (Auto Volume Limiter System): Keeps down the maximum volume to protect your ear. You cannot turn up the volume beyond the defined limit even if you try to turn it up.

1 Press MENU.

The menu display appears on the screen.

Screen

2 Turn the SEL/PUSH EXEC jog dial to select the desired item, then press the jog dial.

The setting screen of the selected item appears.

3 Adjust the setting using the jog dial.

For details on each item, see pages 29 and 30.

To set other items, repeat steps 2 and 3.

4 Press MENU.

The menu display goes off.

You can also turn off the menu display by selecting EXIT in the menu using the jog dial.

BRIGHTNESS

Turn the jog dial to adjust the brightness, then press the jog dial.

darker ← → brighter

COLOUR

Turn the jog dial to adjust the colour intensity, then press the jog dial.

less ← → more

MEGA BASS

Turn the jog dial to set to ON, then press the jog dial.

SURROUND

Turn the jog dial to set to ON, then press the jog dial.

Operations

continued

Adjusting the sound and picture (continued)

AVLS (Auto Volume Limiter System)

Turn the jog dial to set to ON, then press the jog dial.

If the volume bar indication reaches the centre position when AVLS is on, the indication goes no further to the right and the AVLS indicator appears on the screen.

Note

If the audio input level is too high when AVLS is on, the sound may be distorted. In this case, turn the volume down using the VOL control on the display unit.

Resetting the adjustment to the factory preset level

Turn the jog dial to select RESET in the menu, then press the jog dial.

Note

The settings are retained even when you turn off the power.

Using the optional battery pack

If you use a battery pack such as the NP-F550/F750/F950, you can use the Glasstron without connecting to mains.

Charging the battery pack

Charge the battery pack before use. You can charge the battery pack using the power supply box. If you attach the battery pack as described below, the battery pack charges while you are not using the Glasstron.

	Battery life (fully charged battery)	Charging time
NP-F550	Approx. 2 hours 20 minutes	Approx. 8 hours
NP-F750	Approx. 4 hours 40 minutes	Approx. 16 hours
NP-F950	Approx. 6 hours	Approx. 24 hours

- The battery life and charging time may change depending on the conditions of use.
- You can also use a battery pack such as the NP-F530/F730/F930 (not supplied) with the Glasstron.
- You can use an "InfoLITHIUM™" battery pack with the Glasstron. When using such a battery pack, the estimated remaining battery life is displayed not with the time counter but with the indicator.

continued

31 GB

Using the optional battery pack (continued)

Notes

- If the POWER lamp flashes while using the battery pack, charge the battery pack.
- If the CHARGE lamp flashes, the power supply box or battery pack is malfunctioning. Contact your Sony dealer or local authorised Sony service facility.
- Battery life may be shorter in a cold environment. This is a typical battery characteristic.

"InfoLITHIUM" is a trademark of Sony Corporation.

Checking the remaining battery life

When no indication or caution appears on the screen, press the jog dial.

Remaining battery life

When the battery pack is weak, the following message appears on the screen. Replace the battery pack with a charged one.

When using the AC power adapter, the " " mark appears on the screen.

32 GB

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

OPTICS OVERALL SECTION

RG-46 BOARD

BACK LIGHT UNIT

OPTICS BLOCK ASS'Y

SECTION 3 ELECTRICAL ADJUSTMENTS

Precautions on adjustment:

1. Perform the adjustment in the given order.
2. Power supply voltage: DC 9.0 V
3. Equipment required
Electrical adjustment requires the following measuring equipment.
 - (1) Oscilloscope: 2 phenomena, band 30 MHz or more, with delay mode (use 10 : 1 probe unless otherwise specified)
 - (2) Pattern generator
 - (3) Digital voltmeter
 - (4) Frequency counter
 - (5) Connector for adjustment
4. Measurement points for adjustment are located at CN102 on the YM-11P board for VIDEO block, and at CN404 on the RG-46P board for LCD block. The pin No. and signal name of CN102 and CN404 are listed below.

• YM-11P Board, CN102

Pin No.	Signal Name	Pin No.	Signal Name
1	T.GND	6	HAFC
2	FREE RUN ON	7	POWER SW
3	LANC SIG	8	Y
4	V IN	9	VCLVL
5	CHK BL+B	10	SC OUT

• RG-46P Board, CN404

Pin No.	Signal Name	Pin No.	Signal Name
1	GND	6	B OUT
2	EAC OFF	7	HP RET
3	HP L	8	R OUT
4	G OUT	9	PCO
5	HP R	10	N.C

5. Setting Method of External Video Input Mode
Turn the POWER switch on, and operate the SEL/PUSH EXEC jog dial, so that the EXT. VIDEO IN mode becomes active.
(Refer to item 9 on page 22)

6. Setting up Input Signals

In adjusting this set, video signals obtained from the pattern generator are used, and therefore these video output signals must satisfy the specification. Connect the oscilloscope to the VIDEO IN terminal, and confirm that the sync signal amplitude of video signals is approximately 0.3 V, the amplitude of video part is approximately 0.7 V, burst signal amplitude is approximately 0.3 V and flat, and the level ratio of burst signal to “red” signal is 0.30 : 0.66.

Where “chroma signal, and color bar signal with burst signal turned off” is specified in the text, enter chroma signal and color bar signal of which burst signal is turned off to the VIDEO IN terminal as video input signals for adjustment.

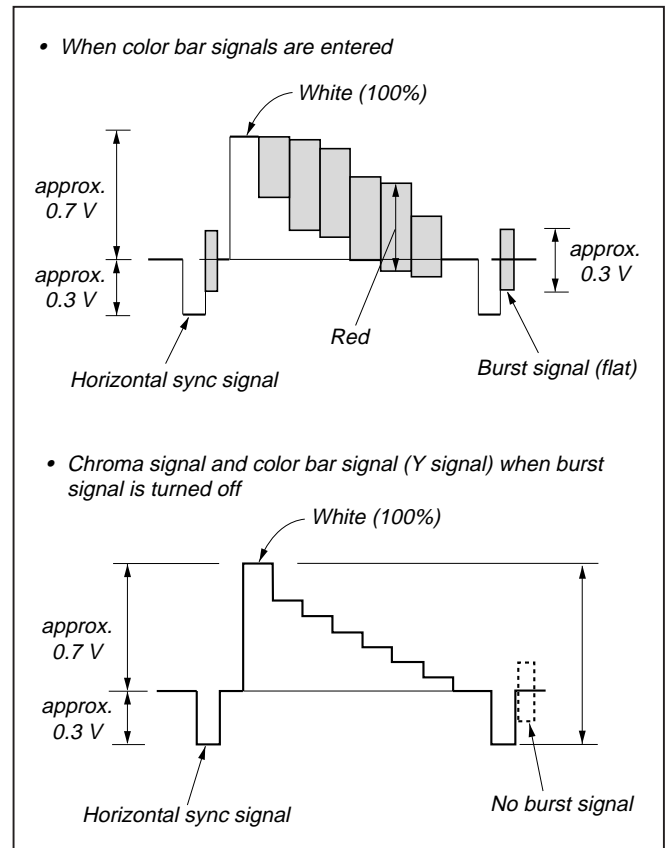

Fig. 3-1. Pattern generator's color bar signals

Preparation:

Connect all electrical blocks as shown below.

POWER SUPPLY BLOCK

[Power supply voltage check] (YM-11P board)

1. Turn the POWER switch on, and confirm that the POWER LED (green) lights up.
2. Confirm that the voltage at each check land (CL) on the YM-11P board satisfies the specification value in Table below. As the ground, use J101 pin ① GND.

Input	No signal input
Measuring equipment	Digital voltmeter
V 5.0 V check	
Measurement point	CL305
Specification value	4.85 ± 0.10 V
D 5.0 V check	
Measurement point	CL307
Specification value	4.95 ± 0.10 V
13.5 V check	
Measurement point	CL306
Specification value	13.50 ± 0.20 V
AU 2.0 V check	
Measurement point	CL308
Specification value	1.85 ± 0.10 V
BL 7.0 V check	
Measurement point	CL310
Specification value	7.00 ± 1.00 V

3. Press the battery detection switch (S705) on the SW-312P board.
(Switch with fixed pawl at the lower right of battery)
Or, short CN903 pin ① and pin ② on the YM-11P board.
(CHARGE mode becomes active.) At this time, confirm that the CHARGE LED (orange) lights up.
4. Under this condition, confirm that the voltage of CN301 pin ① on the YM-11P board is 8.4 ± 0.1 V.
5. After checking, remove a jumper wire used for short in step 3.

Check Parts:

[SW-312P board] (Component side)

[YM-11P board] (Component Side)

[YM-11P board] (Component Side)

[Preparation for Preset Data Writing, Battery Down Adjustment, and Charge Threshold Level Adjustment]

- ① “Preset Data Writing”, “Battery Down Adjustment”, “Charge Threshold Level Adjustment” and all adjustments of “Video Block” must be performed, if IC901 (EEPROM) on the YM-11P was replaced.
- ② “Battery Down Adjustment” and “Charge Threshold Level Adjustment” must be performed, if IC902 (5 V REG.) or IC903 (microprocessor) on the YM-11P was replaced.
- ③ All adjustments of “Video Block” must be performed, if IC101 (OSD), IC103 (Y/C separation), IC201 (Y/R-Y/B-Y decoder) on the YM-11P board, or IC401 (LCD driver) on the RG-46P board, or LCD (optical block) was replaced.

1. Service Jigs

- (1) Adjusting remote commander (RM-95-modified)

Note 1: J-6082-053-B

- (2) Extension cable (for remote commander plug converter)
J-6082-291-A

Note 1: The page will not be changed over, unless the microprocessor in the adjusting remote commander is a new one (UPD7503-G-C56-12). In such a case, replace with new microprocessor (8-759-148-35).

2. Adjusting Remote Commander

For the adjustment, the adjustment data saved in the nonvolatile memory (EEPROM) must be rewritten, and for this purpose the adjusting remote commander is used.

The adjusting remote commander makes two-way communication with the product using a remote control signal line (LANC). The adjusting remote commander transmits pages, addresses, and data up/down commands to the product. The product transmits pages, addresses, and data to the adjusting remote commander.

3. How to Use Adjusting Remote Commander

- (1) Connect the adjusting remote commander to the CN902 on YM-11P board via extension cable (J-6082-291-A).
(At this time, set the switch of extension cable to OFF)
(OPEN) position.

Turn ON the power on the set.

- (2) Set the HOLD switch on the adjusting remote commander to the HOLD (SERVICE) position.

If connection is normal, the LCD display on the adjusting remote commander will be as shown in Fig.3-2.

Fig. 3-2

Adjusting Remote Commander RM-95 (J-6082-053-B)

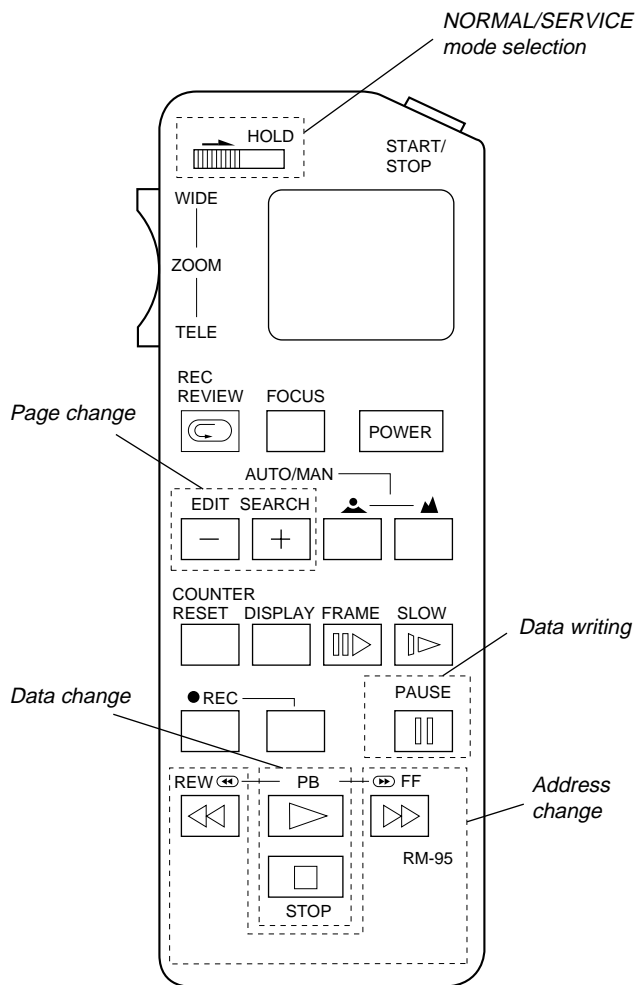

Fig. 3-3

(3) Operate the adjusting remote commander as follows:

Hexadecimal numbers	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
LCD display	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
Decimal conversion	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

- Address change
Press the FF (▶▶) button to increase the address.
Press the REW (◀◀) button to decrease the address.
There are 256 addresses from 00 to FF.
 - Data change (data setting)
Press the PLAY (▶) button to increase the data.
Press the STOP (■) button to decrease the data.
There are 256 data from 00 to FF.
 - Adjustment data writing
The PAUSE button must be pressed to write adjustment data (D page) to the nonvolatile memory (EEPROM). (Unless the PAUSE is pressed, new data are not saved in the non-volatile memory.)
- (4) Select page: 1, address: 00, and set 01 data. Thus, the data input to page: D, address: 00 – 1A is enabled.
- (5) After the adjustment finished, select page: 1, address: 00, and set 00 data. Thus, the data change on page D is disabled.
- (6) After all adjustments finished, turn OFF the main power supply (9.0 V) once.
4. Precaution on Use of Adjusting Remote Commander
Misoperation of the adjusting remote commander could erase correct data. To prevent this, it is recommended to make a note of data from address 00 to 4B on page D before adjustment, and also to make a note of new adjustment data each time the adjustment of one item is finished.

5. Data Processing

Certain adjustment items require the microprocessor data to be read out or the displayed data (hexadecimal numbers) on jigs or adjusting remote commander to be calculated to get adjustment data. In such a case, convert hexadecimal numbers into decimal numbers once, then make calculation, and convert its result into hexadecimal number as adjustment data. Table 1 shows hexadecimal – decimal number conversion.

Hexadecimal – Decimal number conversion.

Lower digit of hex. Higher digit of hex.																
	0	1	2	3	4	5	6	7	8	9	A (H)	B (b)	C (c)	D (d)	E (E)	F (F)

Table 1.

Note: Data in () are displayed on jig or adjusting remote commander.

Example: If display on jig or adjusting remote commander is BD (bd)

As higher digit of hex. number is B (b) and lower digit is D (d), the intersection “189” of ① and ② in Table 1 is the target decimal number.

6. Power ON Procedure for Adjustment

- (1) Connect an extension cable to the adjusting remote commander.
- (2) After making sure that the HOLD switch on the adjusting remote commander is not turned on (not at left (NOR) position), supply 9.0 Vdc to the DC IN (J301).
(With the HOLD switch at HOLD position, the initial operation of the set does not finish, disabling the POWER switch function.)
- (3) Turn ON the POWER switch on the set. Confirm that a green LED lights up.
- (4) Set the HOLD switch on the adjusting remote commander to the HOLD (right (ADJ)) position.

7. Adjustment Finishing Procedure

Order	Page	Address	Data	Description	Remarks
1.	D	01 – 4B		Check if adjusted data are written correctly to the given page and address.	
2.	2	00	00	Set 00 to given page and address.	Page 2: Reset
3.	1	00	00		Page D: Write protect
4.	Set HOLD switch on adj. remote commander to NOR position.				

8. Password Reset (for operation check of the set)

- (1) Turn the POWER switch on, then press the “Password Reset” at the bottom of Power Box to reset the password set by the customer.
- (2) Operating the jog dial, select “No” on the Password Set screen to set “disuse of password”.

Or,

Order	Page	Address	Data	Description	Remarks
1.	1	00	01	Set 01 to given page and address.	Page D: Cancel protect
2.	D	04	FF	Set FF to given page and address and press PAUSE.	Set disuse of password

Final: After all adjustments and operation check finished, turn the POWER switch on, press the "Password Reset" at the bottom of Power Box, and turn the POWER switch off.

9. EXT. VIDEO AUDIO mode: Turn the POWER switch on, and press and operate the jog dial from the initial screen.

Or,

Order	Page	Address	Data	Description	Remarks
1.	2	00	01	Set 01 to given page and address.	
2.	2	2B	00	Set 00 to given page and address.	

10. Picture and tone quality standard setting: Press the Menu key and SEL/PUSH EXEC “RESET” with the jog dial.

Or,

Set data 01 to page:1, address:00 to cancel the protect on page D.

Order	Page	Address	Data	Description	Remarks
	D	3C	00	Set data 00 to given page and address, and press PAUSE.	Ope. – Brightness: Center
	D	3E	00		Ope. – Contrast: Center
	D	3F	00		Ope. – Bass boost: OFF
	D	40	00		Ope.– Surround: OFF
	D	41	00		Ope. – VOL. limit: OFF

Volume (Display unit) – Maximum

[Preset Data Writing]

Connection:

- (1) Connect the adjusting remote commander to the CN902 on YM-11P board.

Data Writing Procedure

- (1) Set data: 01 to page: 1, address: 00.
- (2) Enter the data given in the table below.

Note: To write the data to the EEPROM, press the PAUSE button on the adjusting remote commander each time the data is set.

- (3) After writing all data, set data: 00 to page: 1, address: 00.

D Page Adjustment Address and Initial Value

Data in () in Initial set column are different from the data adjusted at the shipment.

Make setting and adjustment only when IC901 (EEPROM) was replaced.

Data in Memo column are fixed value. Always set to this value.

Address	Data		Remarks
	Initial set	Memo	
00	00	00	Fixed value

[Battery Down Adjustment]

Mode	Video/audio signals are output
Signal	VIDEO IN: Color bar AUDIO IN L: 1kHz, -20 dBs AUDIO IN R: 1kHz, -20 dBs
Measurement point	Displayed data on adj. remote commander
Measuring equipment	
Adjustment page	D
Adjustment address	08, 09, 0A, 0B, 0C, 0D, 42, 43, 44, 45, 46
Specification value	ZZh = 5Fh \pm 05h

Connection:

Referring to Fig. 3-4, connect the following equipment.

- (1) Connect the regulated power supply and a digital voltmeter to the battery terminal.
- (2) Connect the adjusting remote commander to the CN902 on YM-11P board.
- (3) Connect a pattern generator to the VIDEO IN terminal.
- (4) Connect an audio oscillator and attenuator to the AUDIO IN terminal.

Menu Setting:

(Picture and tone quality setting) (see page 22)

Adjustment Procedure:

- (1) Adjust the output voltage of regulated power supply so that the battery terminal voltage is 7.2 Vdc.
- (2) Turn ON the POWER switch on the set.
- (3) Operate the jog dial on the set so that the video and audio signals are output. (EXT. VIDEO AUDIO mode)
(See page 22)
- (4) Set data: 01 to page: 1, address: 00.
(Cancel D page protect)
- (5) Set data: 01 to page: 2, address: 00.
- (6) Adjust the output voltage of regulated power supply so that the battery terminal voltage is 5.77 ± 0.02 Vdc.
- (7) Read data (ZZh) on page: 2, address: 27.
- (8) Confirm that the data (ZZh) satisfies the specification value.
- (9) Using the following formulas (calculation of hexadecimal numbers), calculate the adjustment data and enter them to respective adjustment addresses.

(Refer to 5. Data Processing on page 21)

Address: 08	$D_{08} = ZZh + 25h$
Address: 09	$D_{09} = ZZh + 20h$
Address: 0A	$D_{0A} = ZZh + 19h$
Address: 0B	$D_{0B} = ZZh + 0Ch$
Address: 0C	$D_{0C} = ZZh$
Address: 42	$D_{42} = ZZh + 1Ch$
Address: 43	$D_{43} = ZZh + 10h$
Address: 44	$D_{44} = ZZh + 0Bh$
Address: 45	$D_{45} = ZZh + 05h$
Address: 46	$D_{46} = ZZh - 02h$

Note: After setting each data, be sure to press the PAUSE button on the adjusting remote commander.

- (10) Set data: 10 to page: D, address: 0D, and press the PAUSE button on the adjusting remote commander.
- (11) Set data: 10 to page: D, address: 47, and press the PAUSE button on the adjusting remote commander.
- (12) Set data: 00 to page: 2, address: 00.
- (13) Set data: 00 to page: 1, address: 00.

[Charge Threshold Level Adjustment]

Mode	Power ON
Signal	Any
Measurement point	Displayed data on adj. remote commander
Measuring equipment	
Adjustment page	D
Adjustment address	0E, 0F, 10, 11, 12
Specification value	YYh = D9h \pm 09h

Connection:

Referring to Fig. 3-4, connect the following equipment.

- (1) Connect the regulated power supply and a digital voltmeter to the battery terminal.
- (2) Connect the adjusting remote commander to the CN902 on YM-11P board.

Adjustment Procedure:

- (1) Adjust the output voltage of regulated power supply so that the battery terminal voltage is 7.2 Vdc.
- (2) Turn ON the POWER switch on the set.
- (3) Set data: 01 to page: 1, address: 00.
- (4) Set data: 01 to page: 2, address: 00.
- (5) Set data: 01 to page: 2, address: 2C.
- (6) Adjust the output voltage of regulated power supply so that the battery terminal voltage is 8.3 ± 0.02 Vdc.
- (7) Read data (YYh) on page: 2, address: 2D.
- (8) Confirm that the data (YYh) satisfies the specification value.
- (9) Using the following formulas (calculation of hexadecimal numbers), calculate the adjustment data and enter them to respective adjustment addresses.

(Refer to 5. Data Processing on page 21)

Address: 0E $D_{0E} = YYh + 04h$

Address: 0F $D_{0F} = YYh$

Address: 10 $D_{10} = YYh - 5Ah$

Address: 11 $D_{11} = YYh - 55h$

Address: 12 $D_{12} = YYh + 09h$

Note: After setting each data, be sure to press the PAUSE button on the adjusting remote commander.

- (10) Set data: 00 to page: 1, address: 00.
- (11) Set data: 00 to page: 2, address: 00.
- (12) Set data: 00 to page: 2, address: 2C.

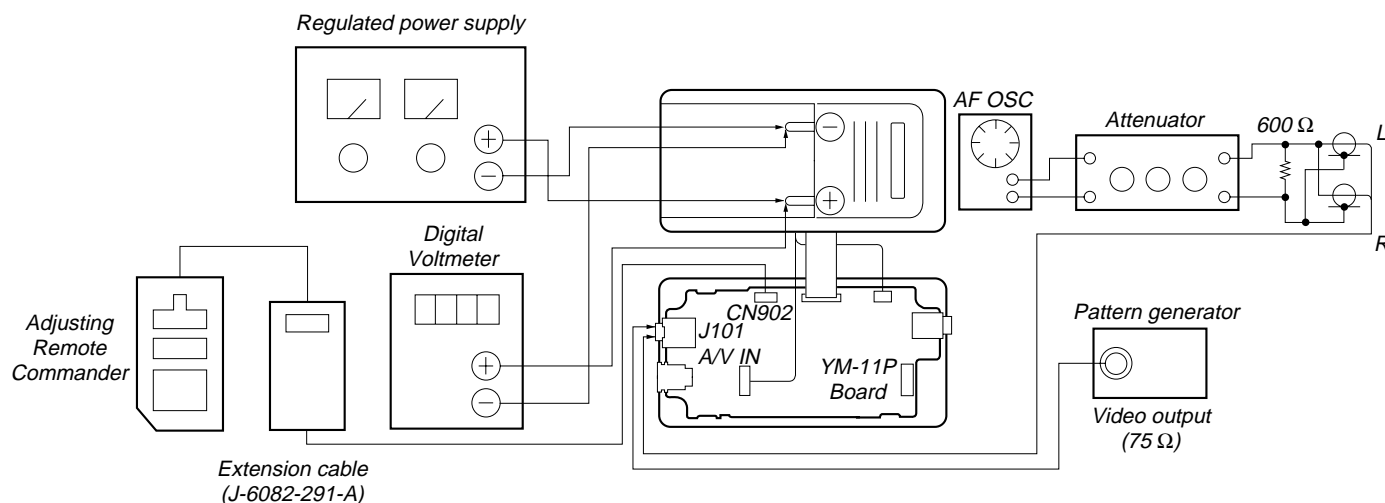

Fig. 3-4

VIDEO BLOCK

To adjust the video block, connect a pattern generator as shown below. As video input signals for adjustment, enter video output signals (color bar signals), unless otherwise specified. (For details, see page 17)

[Color Demodulation Subcarrier Adjustment]

Condition:

Input signal	No signal
Measurement point	YM-11P board CN102 pin ⑩
Measuring equipment	Frequency Counter
Adjustment page	D
Adjustment address	2F
Specification value	4.433619 MHz \pm 25 Hz

Connection:

Adjustment Procedure:

- (1) Connect a frequency counter to the CN102 pin ⑩ on YM-11P board.
- (2) Connect CN102 pin ② and pin ① on the YM-11P board. (OSD internal video signal OFF)
- (3) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (4) On page: D, address: 2F, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the frequency counter reading satisfies the specification value.
- (5) Disconnect CN102 pin ② and pin ① on the YM-11P board. (OSD internal video signal ON)

Adjustment and Adjustment Parts: YM-11P board (see page 33)

[OSD (On-Screen Display) Horizontal Sync Frequency Adjustment]

Condition:

Input signal	Color bar signal
Measurement point	YM-11P board CN102 pin ⑥
Measuring equipment	Oscilloscope
Adjustment device	RV101 on YM-11P board
Specification value	2.2 \pm 0.1 μ S

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode. (See page 22)
- (2) Connect an oscilloscope to the CN102 pin ⑥ on YM-11P board.
- (3) Adjust RV101 on the YM-11P board so that the ① level of waveform on the oscilloscope satisfies the specification value.

Adjustment and Adjustment Parts: YM-11P board (see page 33)

[OSD (On-Screen Display) Internal Signal DC Level Adjustment]

Condition:

Input signal	Color bar signal
Measurement point	YM-11P board CN102 pin ⑨
Measuring equipment	Digital voltmeter
Adjustment page	D
Adjustment address	2E
Specification value	2.5 \pm 0.1 V

Connection:

Adjustment Procedure:

- (1) Connect a digital voltmeter to the CN102 pin ⑨ on YM-11P board.
- (2) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (3) On page: D, address: 2E, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the digital voltmeter reading satisfies the specification value.

Adjustment and Adjustment Parts: YM-11P board (see page 33)

LCD BLOCK

- View angle correction
In making the LCD adjustment (except V.COM L adjustment, V.COM R adjustment, and white balance adjustment), first short the CN404 pin ① (GND) and pin ② (EAC OFF) on the RG-46P board (to turn off the view angle correction). After adjustment, disconnect a jumper wire for shortcircuit.
- For the LCD adjustment, connect a pattern generator as shown below. (For details, see page 17)

- Make the following adjustment in the given order.

[LCD TG PLL Frequency Adjustment]

Condition:

Input signal	Color bar signal
Measurement point	RG-46P board CN404 pin ⑨
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	2B
Specification value	2.7 ± 0.1 V

Connection:

Adjustment Procedure:

- Select EXT. VIDEO AUDIO mode. (See page 22)
- Connect an oscilloscope to the CN404 pin ⑨ on the RG-46P board.
- Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- On page: D, address: 2E, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the ③ level of waveform on the oscilloscope satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[RGB Brightness Adjustment]

Note: The view angle correction must be turned off.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	25
Specification value	7.4 ± 0.1 V

Connection:

Adjustment Procedure:

- Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- Connect an oscilloscope to the CN404 pin ④ on the RG-46P board.
- Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- On page: D, address: 25, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the ⑤ level of waveform on the oscilloscope satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[Contrast Adjustment]

Note: The view angle correction must be turned off.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	24
Specification value	3.05 ± 0.10 V

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect an oscilloscope to the CN404 pin ④ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 24, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the ㉓ level of waveform on the oscilloscope satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[B Brightness Adjustment]

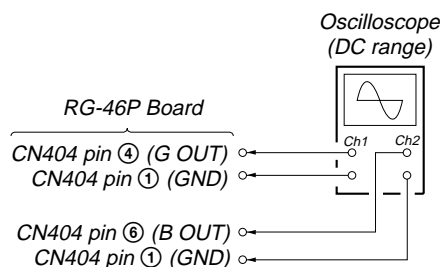

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④ and pin ⑥
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	26
Specification value	± 0.05 V

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect CH1 of oscilloscope to the CN404 pin ④, and CH2 to the CN404 pin ⑥ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 26, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that a difference between ㉓' level of waveform on the CH2 of oscilloscope and ㉓ level (㉓ level of RGB Brightness Adjustment) on the CH1 satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[B Gain Adjustment]

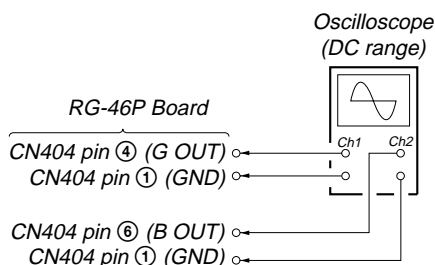

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④ and pin ⑥
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	22
Specification value	± 0.05 V

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect CH1 of oscilloscope to the CN404 pin ④, and CH2 to the CN404 pin ⑥ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 22, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that a difference between ④' level of waveform on the CH2 of oscilloscope and ④ level (④ level of Contrast Adjustment) on the CH1 satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[R Brightness Adjustment]

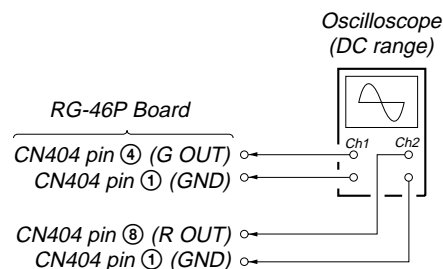

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④ and pin ⑧
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	27
Specification value	± 0.05 V

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect CH1 of oscilloscope to the CN404 pin ④, and CH2 to the CN404 pin ⑧ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 27, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that a difference between ④' level of waveform on the CH2 of oscilloscope and ④ level (④ level of RGB Brightness Adjustment) on the CH1 satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[R Gain Adjustment]

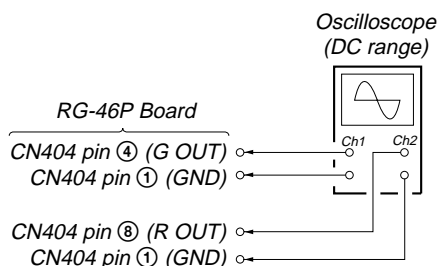

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	RG-46P board CN404 pin ④ and pin ⑧
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	23
Specification value	± 0.05 V

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect CH1 of oscilloscope to the CN404 pin ④, and CH2 to the CN404 pin ⑧ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 23, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that a difference between ⑩' level of waveform on the CH2 of oscilloscope and ⑩ level (⑩ level of Contrast Adjustment) on the CH1 satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[Burst Cleaning Adjustment]

- When Anti-pal signal is available, perform the adjustment shown below.

When it isn't available, fix the data Page: D, address: 36 on A0h.

Note: The view angle correction must be turned off.

Condition:

Input signal	Anti-pal signal (Anti-pal signal is included in special color-bar signal and so on.)
Measurement point	RG-46P board CN404 pin ⑥
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	36
Specification value	less than 100 mV

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect an oscilloscope to the CN404 pin ⑥ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 36, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the noise width (⑥ in figure) becomes the minimum.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[Color Adjustment]

Note: The view angle correction must be turned off.

Condition:

Input signal	Color bar signal
Measurement point	RG-46P board CN404 pin ④
Measuring equipment	Oscilloscope
Adjustment page	D
Adjustment address	31
Specification value	290 ± 15 mV

Connection:

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Connect an oscilloscope to the CN404 pin ④ on the RG-46P board.
- (4) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (5) On page: D, address: 21, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that the ⑤ level of waveform on the oscilloscope satisfies the specification value.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[V.COM R]

- Make this adjustment through a visual check.

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Monoscope signal
Measurement point	Right LCD screen
Measuring equipment	Visual check
Adjustment page	D
Adjustment address	28

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction OFF: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (4) On page: D, address: 28, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that horizontal streaks do not wobble on the display when looking into the right finder window.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[V.COM L]

- Make this adjustment through a visual check.

Note: The view angle correction must be turned off.

Before this adjustment, the Contrast Adjustment must be finished.

Condition:

Input signal	Monoscope signal
Measurement point	Left LCD screen
Measuring equipment	Visual check
Adjustment page	D
Adjustment address	29

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction ON: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Set (or confirm) data: 01 to page: 1, address: 00. (Cancel D page protect)
- (4) On page: D, address: 29, change data with the PLAY and STOP buttons and press the PAUSE button to write data so that horizontal streaks do not wobble on the display when looking into the left finder window.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

[White Balance Adjustment]

- Make this adjustment through a visual check.

Note: The view angle correction must be turned off.

Condition:

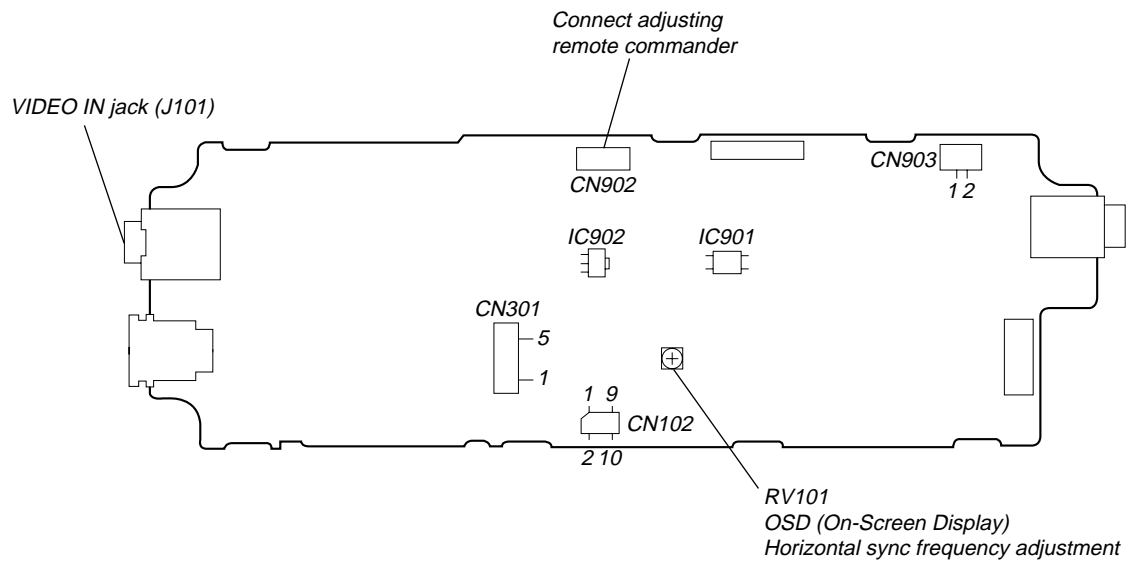

Input signal	Chroma signal, and color bar signal with burst signal turned off
Measurement point	LCD screen
Measuring equipment	Visual check
Adjustment page	D
Adjustment address	26, 27

Adjustment Procedure:

- (1) Select EXT. VIDEO AUDIO mode, and picture and tone quality standard setting. (See page 22)
- (2) View angle correction ON: Connect CN404 pin ② (EAC OFF) and pin ① (GND) on the RG-46P board.
- (3) Set (or confirm) data: 01 to page: 1, address: 00.
(Cancel D page protect)
- (4) Page: D, address: 26, 27
Change data at these two addresses with the PLAY and STOP buttons and press the PAUSE button to write data so that the display achromatic gray gradation (not colored in blue or red) while looking into the left and right finders.

Adjustment and Adjustment Parts: RG-46P board (see page 33)

SECTION 4 DIAGRAMS

4-1. IC PIN FUNCTION DESCRIPTION

• RG-46P BOARD IC401 CXA1854AR (LCD VIDEO SIGNAL PROCESSOR, LCD TIMING CONTROL)

Pin No.	Pin Name	I/O	Function
1	SYNCIN	I	Video signal (brightness signal) input to the sync separation circuit
2	YIN	I	Video signal (brightness signal) input terminal
3	AGCADJ	I	AGC level setting signal input from the D/A converter (IC402)
4	AGCTC	O	Connected to the time constant circuit for AGC
5	PICT	I	Brightness signal frequency characteristics setting signal input from the D/A converter (IC402)
6	GND1	—	Ground terminal (analog system)
7	MODE1	I	For selecting video mode (NTSC/PAL) “H”: NTSC, “L” or “M” (middle setting) : PAL At “L”, SPAL (chroma demodulation is executed internally), At “M” (middle setting), DPAL (external delay line is used for demodulation) (fixed at “H” in this set)
8	MODE2	I	For selecting composite/brightness color difference/brightness-chroma signal “H”: composite signal input, “M” (middle setting): brightness color difference signal input, “L”: brightness-chroma signal input Not used (open)
9	EXT-R	I	External digital input R signal Not used (fixed at “L”)
10	EXT-G	I	External digital input G signal Not used (fixed at “L”)
11	EXT-B	I	External digital input B signal Not used (fixed at “L”)
12	RPD	O	PLL phase comparator output terminal
13	VSS	—	Ground terminal (digital system)
14	CKI	I	Master clock signal input from the D/A converter (IC402)
15	CKO	O	Master clock signal output terminal
16	TEST2	I	Input terminal for the test (Normally: open)
17	TEST1	I	
18	TEST0	I	
19	SLCK	I	Fixed at “L” in this set
20	VST2	O	Vertical start pulse output to the left LCD unit Output of vertical scanning start pulse signal added to gate driver
21	VST1	O	Vertical start pulse output to the right LCD unit Output of vertical scanning start pulse signal added to gate driver
22	VCK2	O	Vertical shift clock output to the left and right LCD units Output of vertical shift clock signal added to gate driver
23	VCK1	O	
24	EN	O	Enable pulse signal output to the left and right LCD units
25	CLR	O	Clear pulse signal output to the left and right LCD units
26	TEST4	O	Output terminal for the test (Normally: open)
27	HST1	O	Horizontal start pulse output to the left and right LCD units Output of horizontal sampling start pulse signal added to source driver
28	HCK2	O	Horizontal shift clock output to the left and right LCD units Output of horizontal shift clock signal added to source driver
29	HCK1	O	
30	HD	O	Horizontal drive pulse output terminal Not used (open)
31	VD	O	Vertical drive pulse output terminal
32	TEST5	I	Input terminal for the test (Normally: open)
33	VDD	—	Power supply terminal (+5V) (digital system)
34	RGT	I	For selecting scan mode “H”: normal scan mode, “L”: reverse scan mode (fixed at “L” in this set)

Pin No.	Pin Name	I/O	Function
35	$\overline{\text{X3D}}$	I	3D mode selection signal input from the D/A converter (IC402) “H”: normal mode, “L”: 3D mode
36	TEST7	I	Input terminal for the test (Normally: open)
37	TEST8	I	Input terminal for the test (Normally: open)
38	GND2	—	Ground terminal (analog system)
39	R OUT	O	R signal (primary color signal) output to the left and right LCD units
40	FB R	I	For DC voltage feedback of R signal (pin ③⑨)
41	G OUT	O	G signal (primary color signal) output to the left and right LCD units
42	FB G	I	For DC voltage feedback of G signal (pin ④①)
43	B OUT	O	B signal (primary color signal) output to the left and right LCD units
44	FB B	I	For DC voltage feedback of B signal (pin ④③)
45	VCC2	—	Power supply terminal (+12V) (analog system)
46	BLKLIM	I	For setting the black peak limiter level of RGB output
47	VCC1	—	Power supply terminal (+5V) (analog system)
48	REG	O	Ground for a smoothing capacitor in internal constant-voltage power supply circuit
49	B-YIN	I	Input terminal of color difference demodulating circuit (in DPAL mode) or input of color difference signal (in SPAL mode) Open in NTSC mode
50	R-YIN	I	
51	COUT	O	Chroma signal output terminal (for 1H delay in PAL mode) Not used (open)
52	HUE/RST	I	Hue adjustment terminal (also used for reset input) Not used (open)
53	COLOR	I	Color adjustment terminal Not used (open)
54	XVXO	I	VXO crystal oscillator connection terminal (3.58 MHz) Not used (open)
55	R-BRT	I	R brightness adjustment signal input from the D/A converter (IC402)
56	B-BRT	I	B brightness adjustment signal input from the D/A converter (IC402)
57	RGB GAIN	I	For adjusting the amplitude gain of RGB output (fixed value is input in this set)
58	GAMMA2	I	For adjusting the voltage gain transition point gamma 2 (fixed value is input in this set)
59	GAMMA1	I	For adjusting the voltage gain transition point gamma 1 (fixed value is input in this set)
60	BRIGHT	I	RGB brightness adjustment signal input from the D/A converter (IC402)
61	CONTRAST	I	Contrast adjustment signal input from the D/A converter (IC402)
62	CIN	I	Video signal (chroma signal) input terminal Not used (open)
63	R-GAIN	I	R gain adjustment signal input from the D/A converter (IC402) (for fine adjustment of R signal contrast)
64	B-GAIN	I	B gain adjustment signal input from the D/A converter (IC402) (for fine adjustment of B signal contrast)

• YM-11P BOARD IC101 μ PD6454GT-628-E2 (CHARACTER GENERATOR)

Pin No.	Pin Name	I/O	Function
1	CLK	I	Serial data transfer clock signal input from the system controller (IC903)
2	$\overline{\text{CS}}$	I	Chip select signal input from the system controller (IC903)
3	DATA	I	Serial data input from the system controller (IC903)
4	DVDD	—	Power supply terminal (+5V)
5	OSCOU	O	Clock output terminal (for dot clock generate)
6	OSCIN	I	Clock input terminal (for dot clock generate)
7	$\overline{\text{PCL}}$	I	Reset signal input from the system controller (IC903) Memory clear at the power on (contents of IC are initialized at “L” → “H”)
8	XOSO	O	Clock output terminal (17.734475 MHz) (for internal video signal generate)
9	XOSI	I	Clock input terminal (17.734475 MHz) (for internal video signal generate)
10	DGND	—	Ground terminal
11	VC	O	Character signal output terminal Not used (open)
12	VBLK	O	Blanking signal output for the cut video signals Not used (open)
13	SDE	O	Vertical sync detection signal output to the system controller (IC903) “L”: vertical sync signal present
14	$\overline{\text{VSYO}}$	O	Vertical sync reference signal output to the system controller (IC903) External video signal mode: Composite sync signal separated synchronously is output Internal video signal mode: Vertical sync signal of internal video signal is output
15	$\overline{\text{HSYO}}$	O	Horizontal sync signal output from the APC circuit Not used (open)
16	AVDD	—	Power supply terminal (+5V)
17	VBSO	O	Output of composite video signal mixed with character signal
18	VCNT	I	For adjusting output level of composite video signal and brightness signal
19	VBSI	I	Composite video signal input terminal
20	SSIN	I	Composite video signal input for the synchronous separation
21	SSCR	I	For setting time constant circuit for synchronous separation
22	AFDI	I	Frequency error voltage input for the AFC VCO circuit
23	AGND	—	Ground terminal
24	AFDO	O	Frequency error voltage output for the AFC VCO circuit

• YM-11P BOARD IC103 MC141628FUEB (Y/C SEPARATOR A/D, D/A CONVERTER)

Pin No.	Pin Name	I/O	Function
1	VCOVDD	—	Power supply terminal (+5V) (for VCO)
2	BIAS	I	Bias current input terminal (for VCO)
3	OSCV	I	VCO control voltage input terminal Signal input from the PCOUT (pin 31)
4	DAGND	—	Ground terminal (for D/A converter)
5	Y OUT	O	Brightness signal output terminal
6	DAVCC	—	Power supply terminal (+5V) (for D/A converter)
7	C OUT	O	Chroma signal output terminal
8	DAREF	—	Reference voltage terminal (for D/A converter)
9	IBIAS	—	Current control terminal of bias circuit for D/A, A/D converters
10	TEST	I	Setting terminal for the test mode (Normally: fixed at “L”)
11	$\overline{\text{PAL/NTSC}}$	I	Setting terminal for the video mode (NTSC/PAL) “L”: PAL mode, “H”: NTSC mode (fixed at “L” in this set)
12	BYPASS	I	Setting terminal for the bypass selection (Normally: fixed at “L”)
13	PLLSEL	I	For setting whether clock is entered by color subcarrier input (built-in PLL operation) or by external clock input “L”: built-in PLL operation (fixed at “L” in this set)
14	ADGND	—	Ground terminal (for A/D converter)
15	ADVDD	—	Power supply terminal (+5V) (for A/D converter)
16	CLC	I	For setting time constant for internal clamp circuit (Normally: fixed at “H”)
17	CLOUT	O	Clamp voltage output terminal Not used (open)
18	V IN	I	Video signal input to the internal A/D converter
19	RBT	—	Bottom reference voltage for A/D converter Internal bottom reference voltage is supplied
20	RTP	—	Top reference voltage for A/D converter Internal top reference voltage is supplied
21 to 28	TB7 to TB0	I/O	In/out terminal for the digital interface Not used (fixed at “L”)
29	CLK IN	I	Color subcarrier input from the CXA1950Q (IC201)
30	DVDD	—	Power supply terminal (+5V) (digital system)
31	PCOUT	O	Phase comparator output terminal
32	DGND	—	Ground terminal (digital system)

• YM-11P BOARD IC201 CXA1950Q-T4 (RGB DECODER)

Pin No.	Pin Name	I/O	Function
1	HUE ADJ	I	HUE adjustment signal input from the D/A converter (IC202)
2	APCTC	I	APC (color synchronization) time constant and VXO free-run frequency adjustment signal input from the D/A converter (IC202)
3	VXO2	—	System clock connection terminal (4.433619 MHz)
4	VXO1	—	System clock connection terminal (4.433619 MHz)
5	SC OUT	O	Subcarrier output to the A/D, D/A converter (IC103) for Y/C separator
6	GND2	—	Ground terminal (chrominance system)
7	VCC2	—	Power supply terminal (+5V) (chrominance system)
8	B/B-Y	O	RGB B (blue) or RGB matrix color difference signal (B-Y) output terminal Output of the RGB matrix color difference signal (B-Y) in this set
9	G/Y	O	RGB G (green) or brightness signal output terminal Not used (open)
10	R/R-Y	O	RGB R (red) or RGB matrix color difference signal (R-Y) output terminal Output of the RGB matrix color difference signal (R-Y) in this set
11	DLAIN	I	Delay line amplifier input from the CCD delay line (IC203)
12	COOUT	O	Chroma signal output to the CCD delay line (IC203)
13	ACKTC	—	Connected to the time constant circuit for ACK (auto color killer)
14	DLABIAS	I	Setting terminal for the video mode (NTSC/PAL) “L”: NTSC mode, “H”: PAL mode (fixed at “H” in this set)
15	SYNC	O	Composite sync signal output terminal “L” active Not used (open)
16	BF	O	Burst flag signal output terminal “L” active Not used (open)
17	YCLPTC	—	Connected to the time constant circuit for pedestal clamp
18	ACKOUT	O	ACK (auto color killer) on/off check signal output terminal “L”: ACK on (when APC is unlocked), “H”: normal (when APC is locked) Not used (open)
19	ALTOUT	O	Alternate pulse output in PAL mode Not used (open)
20	SYNCTC	—	Connected to the time constant circuit to clamp sync chip for the sync separation
21	VCLPTC	—	Connected to the time constant circuit for pedestal clamp
22	VREG	O	Regulated power supply output terminal (+4.2V)
23	OUTSW	I	For output mode selection Changing over this terminal selects whether RGB signals or color difference signals are output from the ⑧ to ⑩ pins “L”: color difference signal output, “H”: RGB output (fixed at “L” in set)
24	VIDEO IN	I	Brightness signal input terminal
25	VCC1	—	Power supply terminal (+5V) (brightness signal system)
26	GND1	—	Ground terminal (brightness signal system)
27	SHPCTL	I	For adjusting the sharpness gain Fixed at center voltage in this set
28	SHPF0	I	For adjusting the frequency for sharpness filter
29	TPADJ	—	For setting the timing of internal pulses
30	CADJ	I	Chroma amplifier gain adjustment signal input from the D/A converter (IC202)
31	ACCTC	—	Connected to the time constant circuit for ACC (auto color control)
32	CIN	I	Chroma signal input terminal

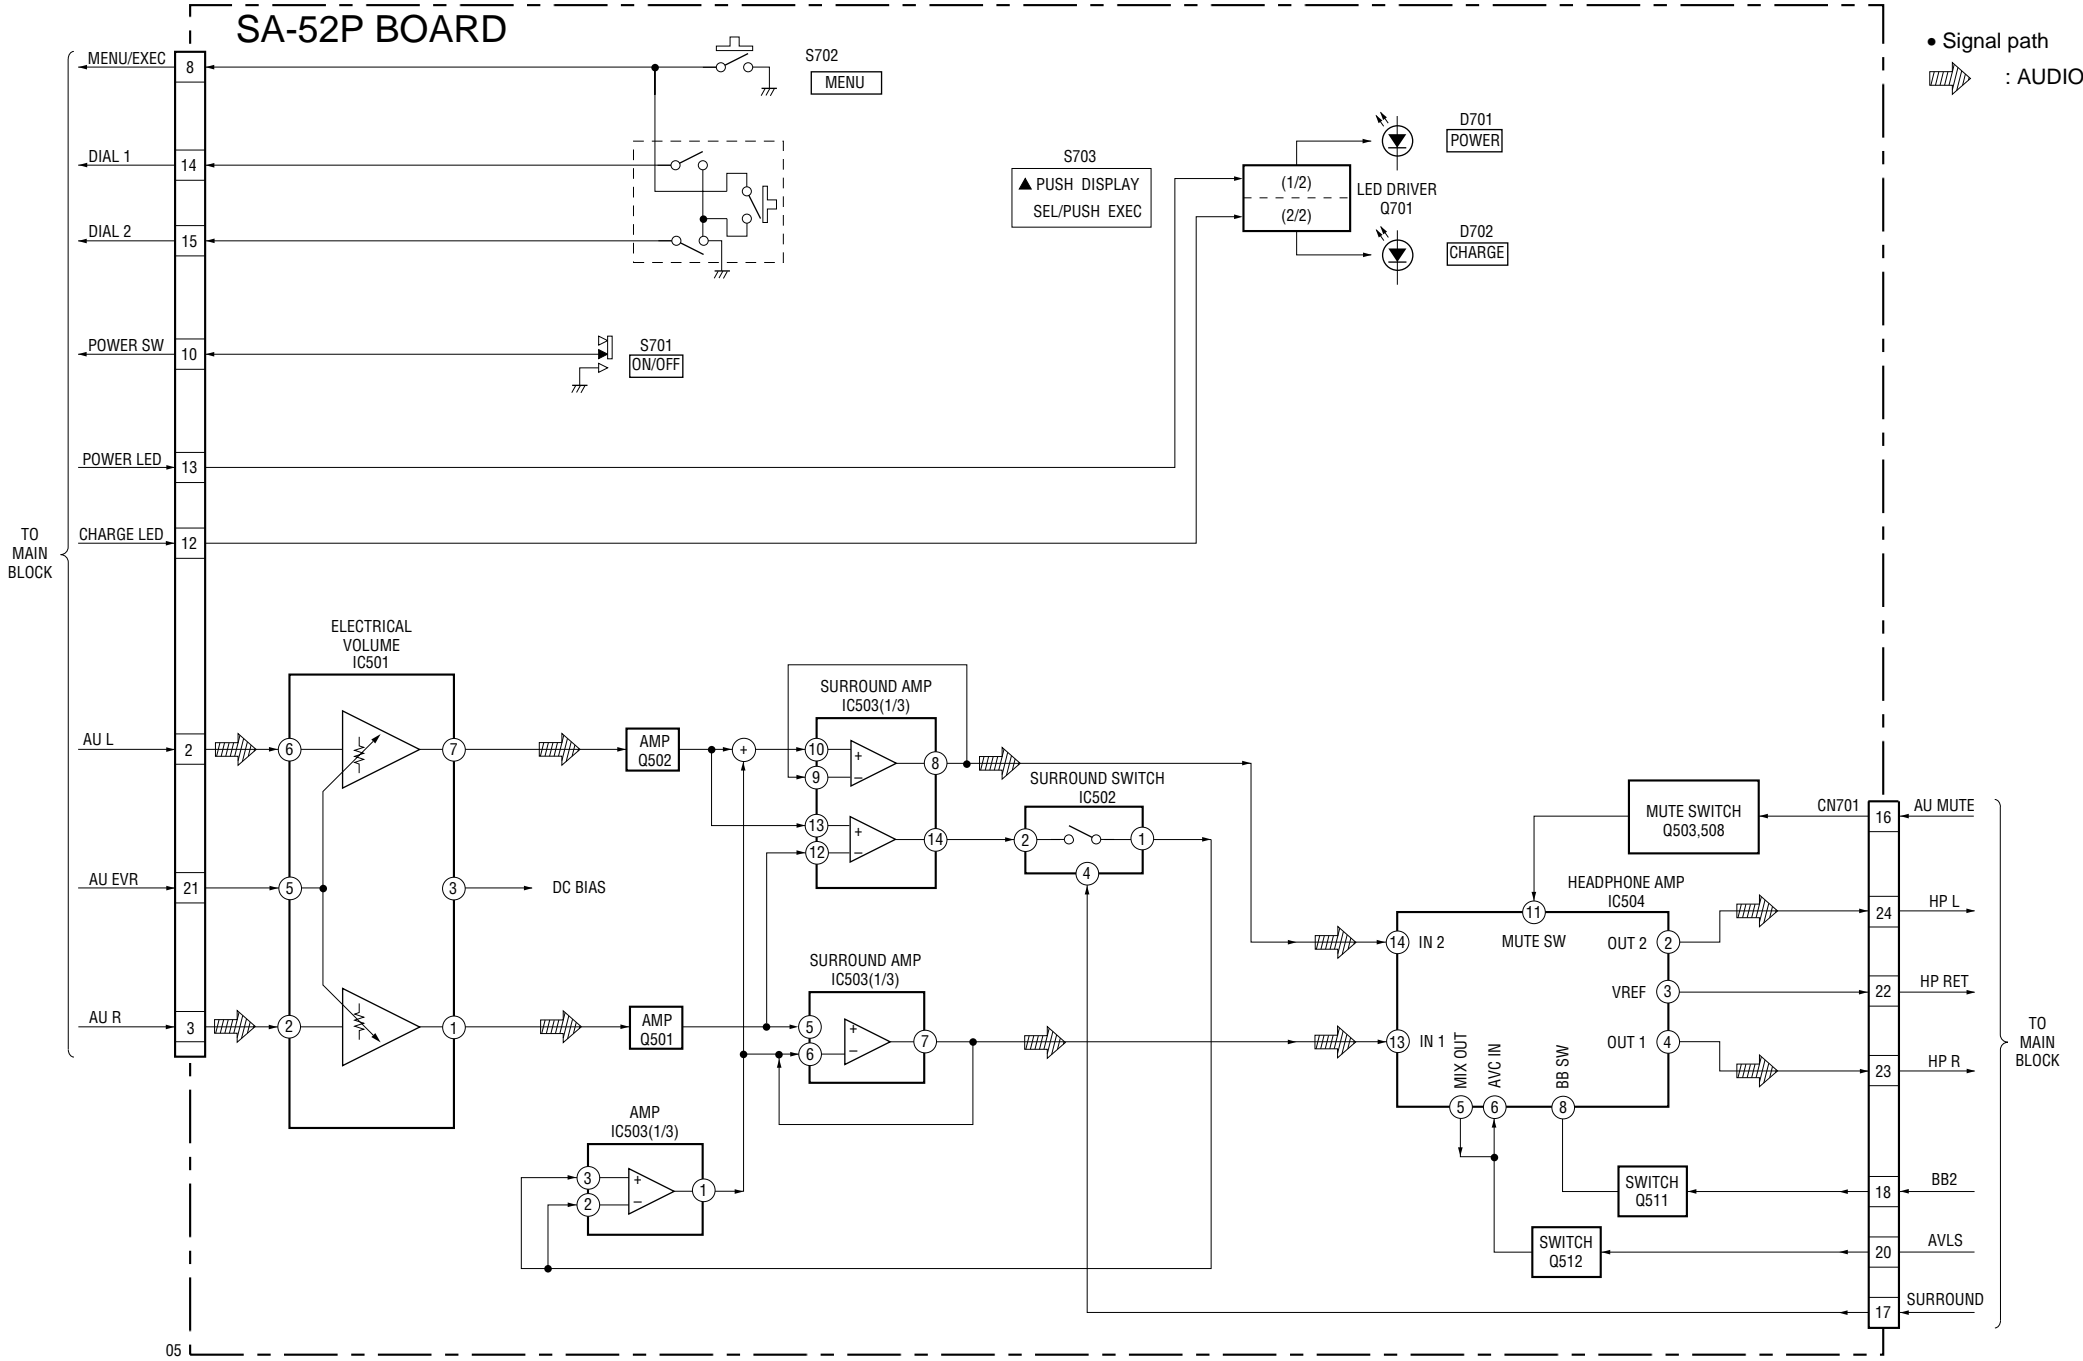

• YM-11P BOARD IC903 MB89098RPFV-G-167 (SYSTEM CONTROLLER)

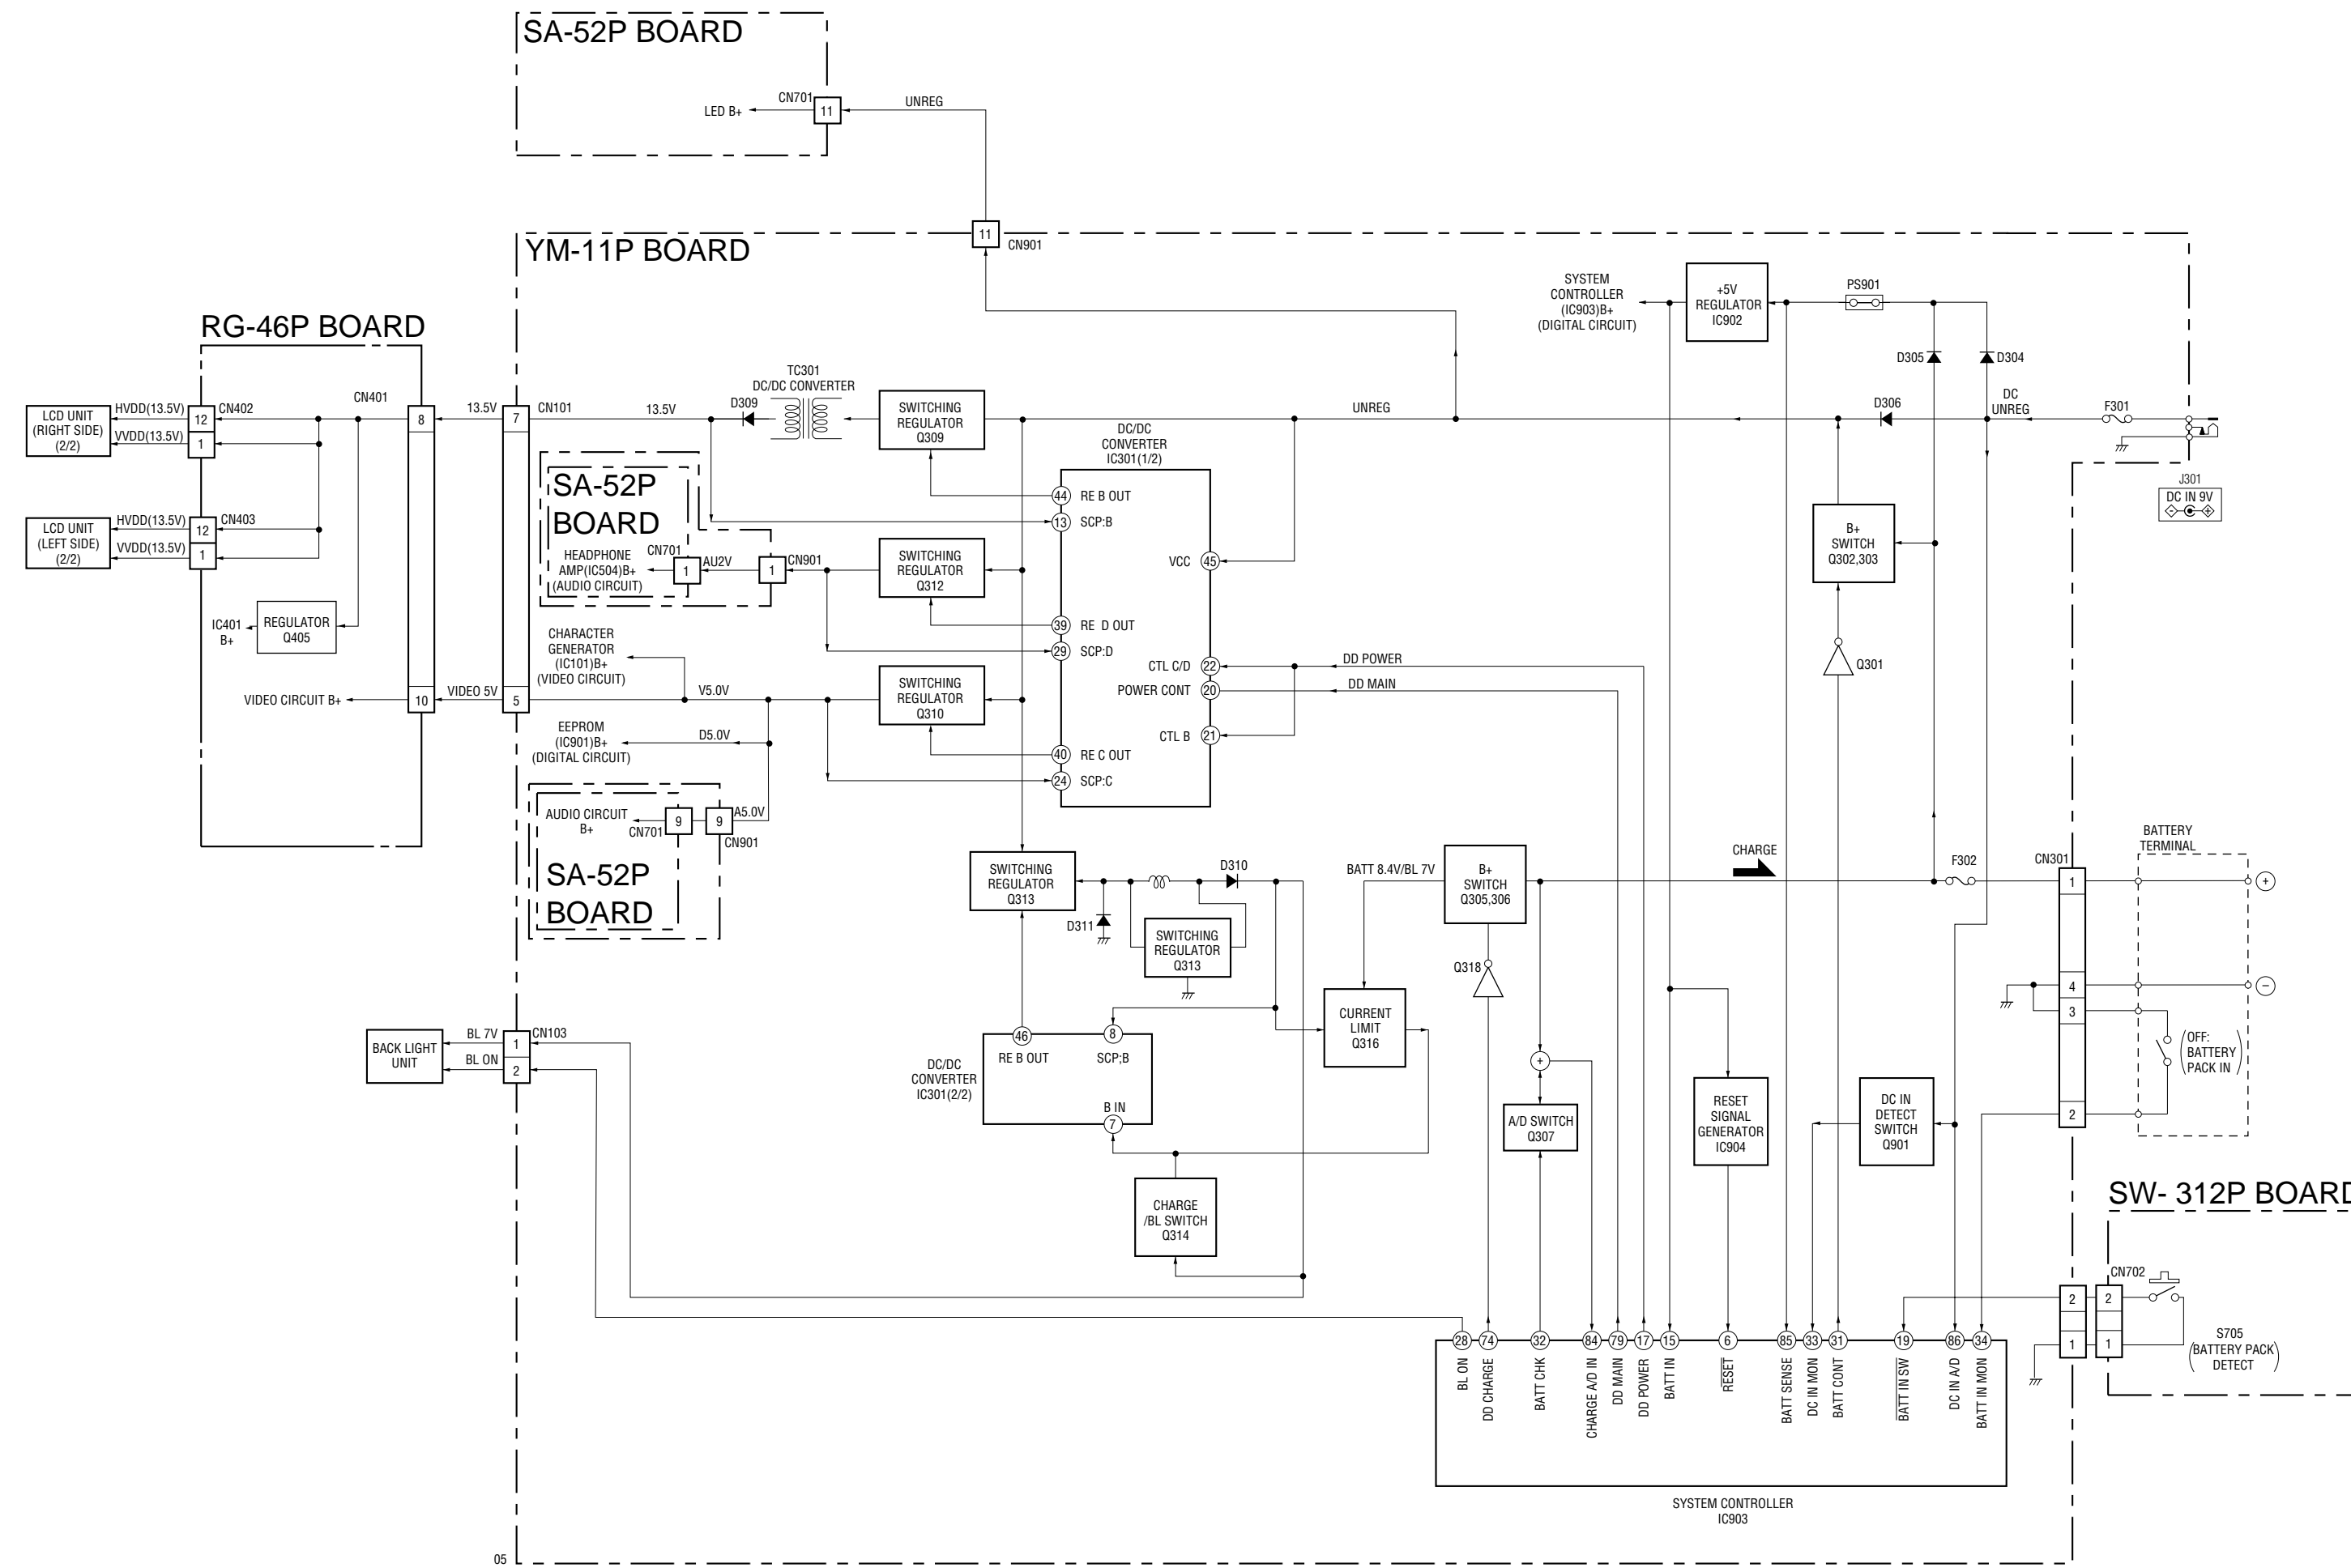

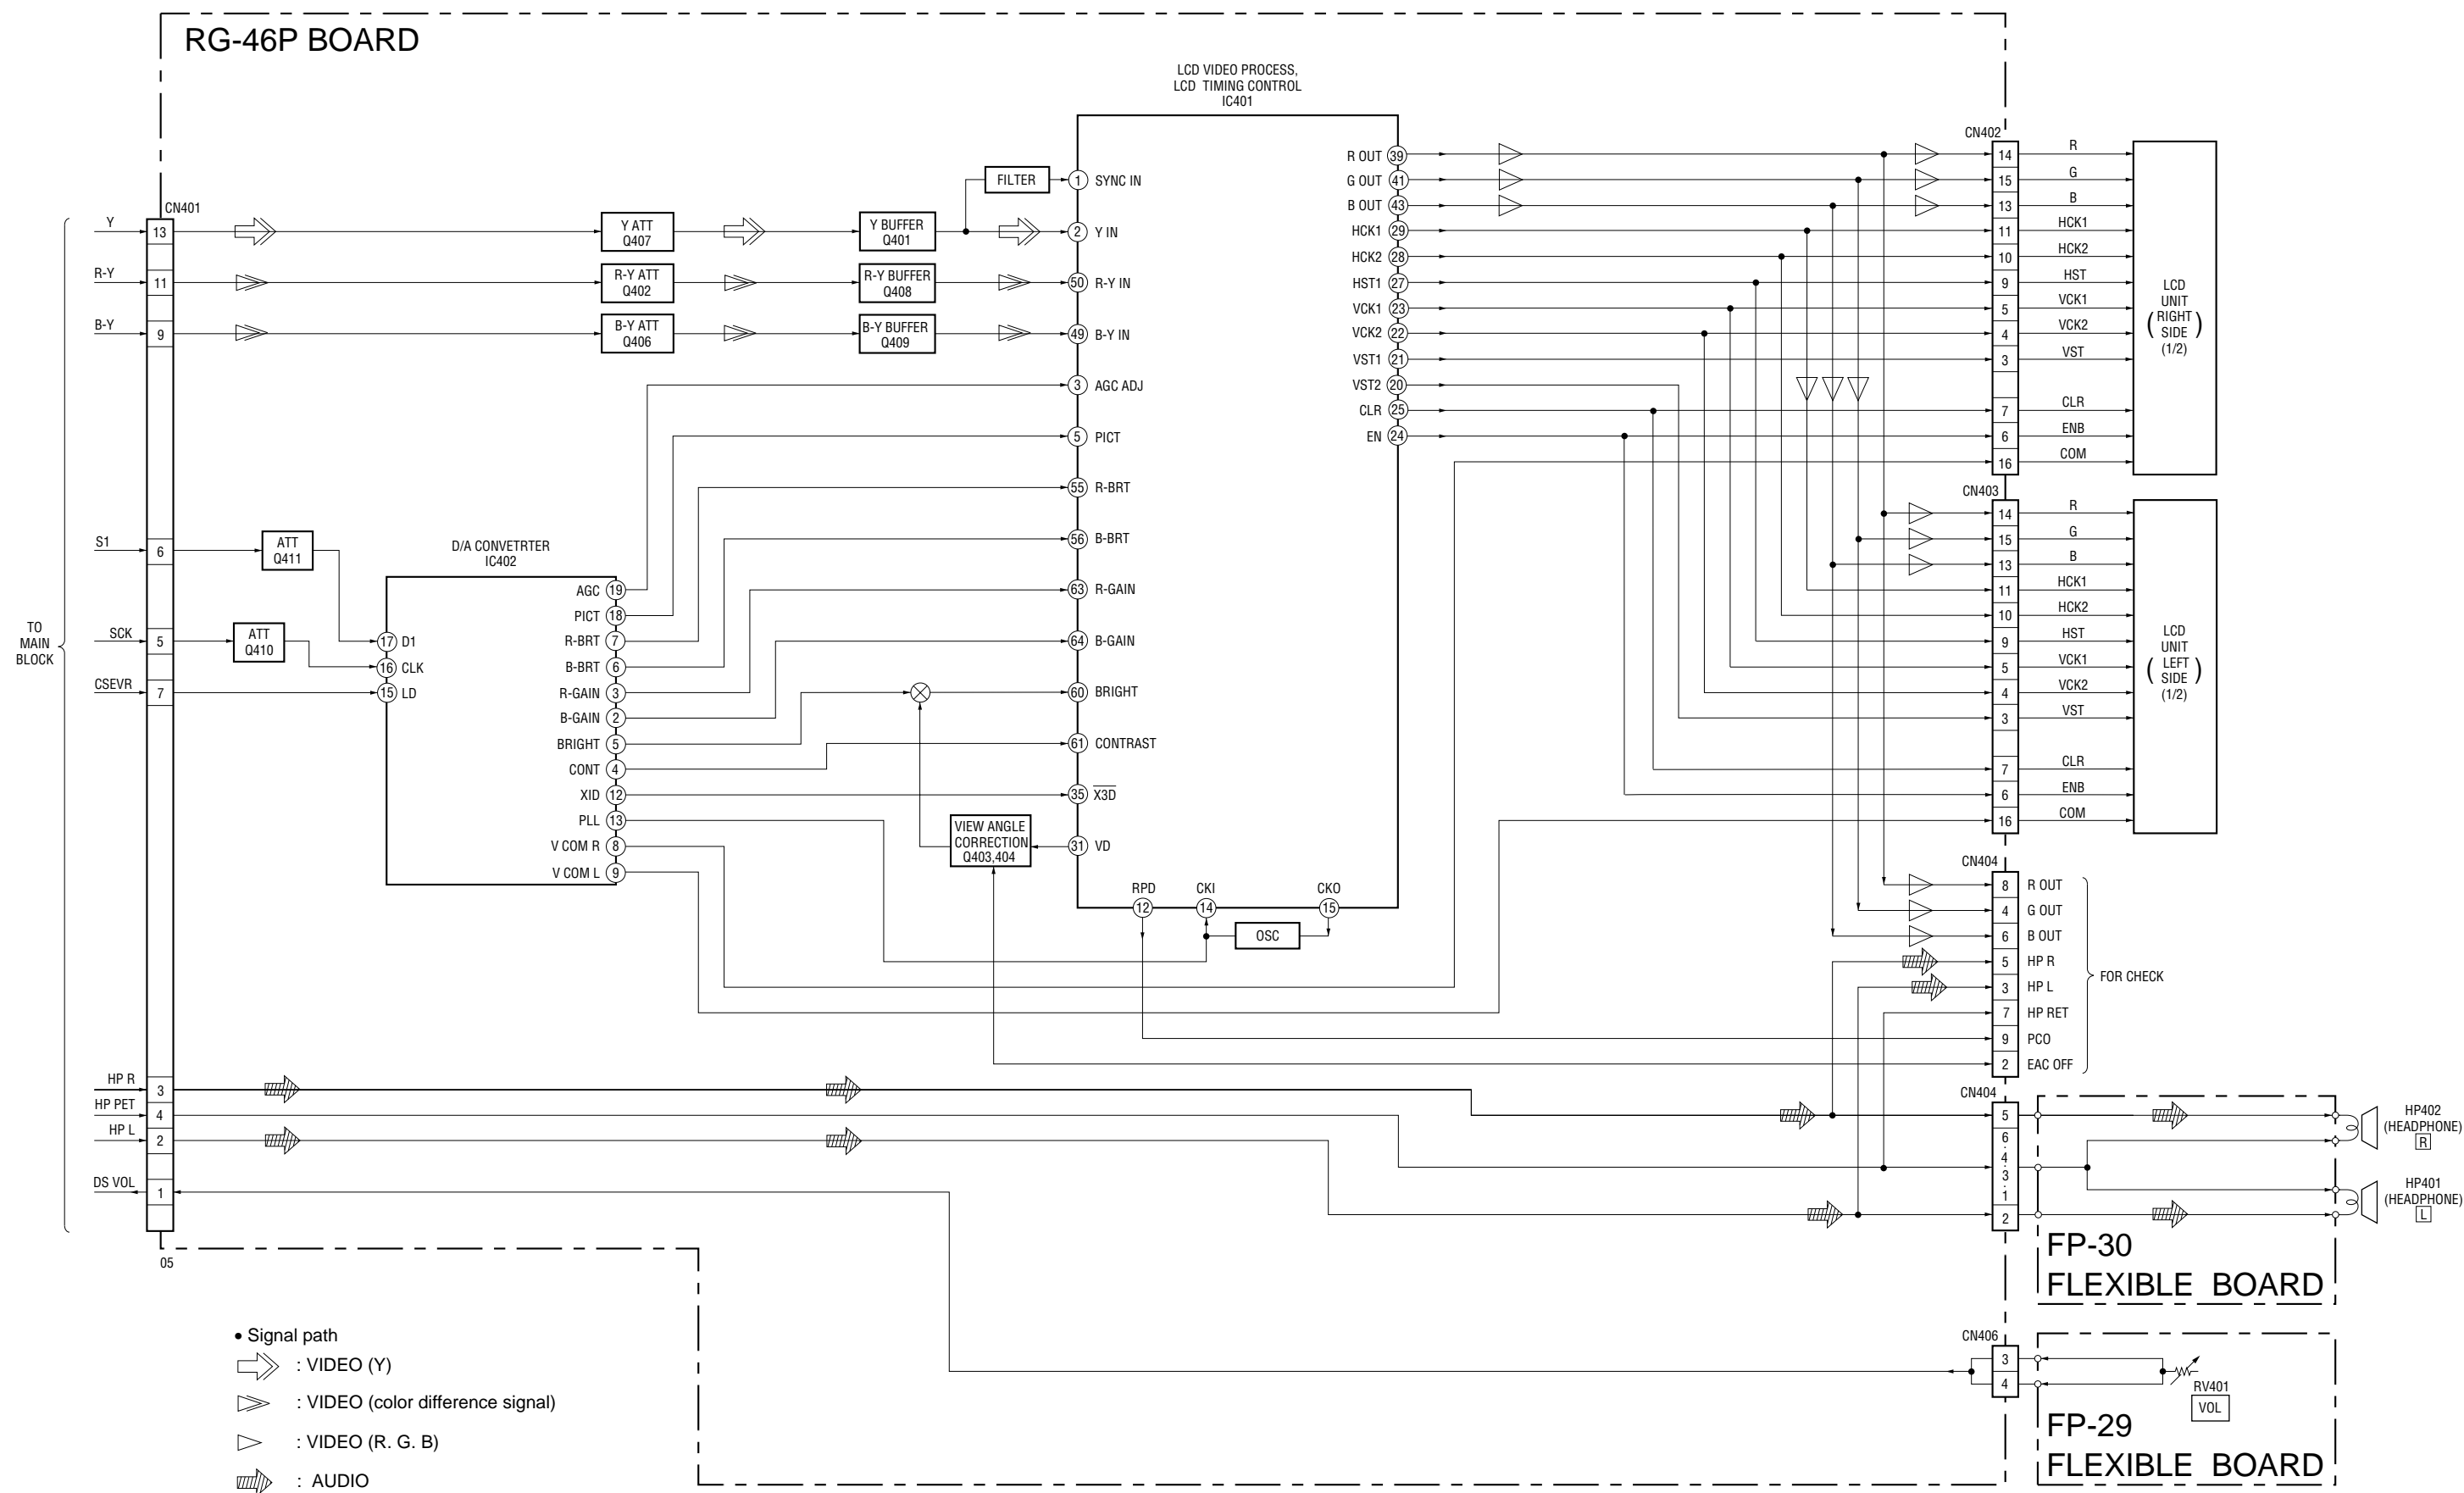

Pin No.	Pin Name	I/O	Function
1	TEST MODE 0	I	Setting terminal for the test mode (Normally: fixed at “L”)
2	TEST MODE 1	I	Setting terminal for the test mode (Normally: fixed at “L”)
3	X0	I	Main system clock input terminal (10 MHz)
4	X1	O	Main system clock output terminal (10 MHz)
5	VSS	—	Ground terminal
6	<u>RESET</u>	I	System reset signal input from the reset signal generator (IC904) “L” reset For several hundreds msec. after the power supply rises, “L” is input, then it changes to “H”
7	BB1 ON	O	Bass boost control signal output terminal “H”: bass boost on Not used
8	BB2 ON	O	Bass boost control signal output to the headphone amplifier (IC504) “H”: bass boost on
9	PASSWORD RESET	I	Pass word reset switch (S901) input terminal Password is erased when “L” is input
10	AUDIO MUTE	O	Audio line muting control signal output terminal “H”: muting on
11	VIDEO MUTE	O	Video muting control signal output terminal “H”: muting on
12	SURROUND	O	Surround control signal output terminal “H”: surround on
13	CHECK MODE	O	Screen check mode selection signal output terminal “L”: screen check mode, “H”: normal mode
14	<u>LANC POWER ON</u>	I	Power supply control input of the LANC “L”: power on Not used (fixed at “H”)
15	BATT IN	I	Power failure detection input terminal
16	PBV	I	Vertical sync reference signal input from the character generator (IC101)
17	DD POWER	O	Power on/off control signal output to the DC/DC converter (IC301) “H”: power on
18	P13/E113	—	Not used (open)
19	<u>BATT IN SW</u>	I	Battery pack detection switch input terminal “L”: battery pack present
20	P15	—	Not used (open)
21	POWER SW	I	Power switch (S701) input terminal (toggle input) “L” is input when power is turned on/off
22	P17	—	Not used (open)
23	<u>SYSTEM RESET</u>	O	Reset signal output to the character generator (IC101) “L”: reset
24	<u>POWER LED</u>	O	LED drive signal output of the POWER indicator (D701) “H”: LED on
25	<u>CHARGE LED</u>	O	LED drive signal output of the CHARGE indicator (D702) “H”: LED on
26	CMOD	I	Selection input of the clock mode Fixed at “H” in this set
27	AVLS ON	O	AVLS (Automatic Volume Limiter System) control signal output to the headphone amplifier (IC504) “H”: AVLS on
28	BL ON	O	Back light unit on/off control signal output terminal “H”: back light on
29	SH MUTE	—	Not used (open)
30	P27/RMCI	—	Not used (open)
31	BATT CONT	O	Output of main power control when rechargeable battery is used “L”: use of DC adapter, “H”: use of rechargeable battery
32	BATT CHK	O	Output of voltage check on/off control in charge mode “H”: voltage check on
33	DC IN MON	I	DC IN detection input terminal “L”: DC present
34	BATT IN MON	I	Dry battery pack detection input terminal “H” is input when battery pack is set
35	DIAL A PHASE	I	Rotary encoder dial pulse input of the screen display/select/enter jog dial (S703) (A phase input)
36	DIAL B PHASE	I	Rotary encoder dial pulse input of the screen display/select/enter jog dial (S703) (B phase input)
37	LED015	O	LED drive signal output terminal Not used (open)
38	<u>CS CAM</u>	O	Chip select signal output terminal Not used (open)

Pin No.	Pin Name	I/O	Function
39 to 44	LED016 to LED021	O	LED drive signal output terminal Not used (open)
45	RMC SEL	I	Not used (fixed at “L”)
46	RMC SEL	—	Not used (open)
47	VCC	—	Power supply terminal (+5V)
48 to 55	SEG15 to SEG08	O	LCD segment drive signal output terminal Not used (open)
56	VSS	—	Ground terminal
57 to 64	SEG07 to SEG00	O	LCD segment drive signal output terminal Not used (open)
65 to 68	V3 to V0	I	Bias voltage input for the LCD drive Not used
69 to 72	COM0 to COM3	O	LCD common drive signal output terminal Not used (open)
73	CG SDE	I	Input of check signal whether vertical sync signal is present or not from character generator (IC101) “L”: vertical sync signal is present
74	DD CHARGE	O	Charge mode on/off control signal output to the DC/DC converter (IC301)
75	DATA TO MASTER	I	Serial data input from the EEPROM (IC901)
76	DATA TO SLAVE	O	Serial data output to the character generator (IC101), D/A converter (IC202) and EEPROM (IC901)
77	MODECON SCK	O	Serial data transfer clock signal output to the character generator (IC101), D/A converter (IC202, 402) and EEPROM (IC901)
78	CS CG	O	Chip select signal output to the character generator (IC101)
79	DD MAIN	O	Main power supply control signal output to the DC/DC converter (IC301)
80	SHUTTER	O	Rectangle waveform (125 Hz) output for the shutter Not used (open)
81	AVSS	—	Ground terminal (for A/D input)
82	MENU/EXEC A/D	I	S702 and S703 keys input on the SA-52P board
83	BATT SIG	I	Not used
84	CHARGE A/D IN	I	Input of battery voltage detection in charge mode (A/D input)
85	BATT SENCE	I	Input of battery capacity detection when rechargeable battery is used (A/D input)
86	DC IN A/D	I	Input of voltage detection when DC adapter is used (A/D input)
87	VOL I/F A/D	—	Not used (open)
88	VOL DS A/D	I	Volume control input terminal (A/D input)
89	P97/AN07	—	Not used (open)
90	AVCC	—	Power supply terminal (+5V) (for A/D input)
91	CS EEPROM	O	Chip select signal output to the EEPROM (IC902)
92	WE EEPROM	O	Data write enable signal output to the EEPROM (IC902)
93	CS DA	O	Chip select signal output to the D/A converter (IC202, 402)
94	PA3/AN11	—	Not used (open)
95	LANC IN	I	LANC serial data input terminal (for test)
96	LANC OUT	O	LANC serial data output terminal (for test)
97	BUZZER	O	Buzzer sound output terminal Not used (open)
98	BACK UP VCC	—	Power supply terminal (+5V)
99	CL1	O	Sub system clock output terminal (32.768 kHz)
100	CL0	I	Sub system clock input terminal (32.768 kHz)

4-3. BLOCK DIAGRAM – AUDIO/KEY CONTROL Section –

4-6. NOTES FOR PRINTED WIRING BOARD AND SCHEMATIC DIAGRAM

- Note on Schematic Diagram:**
- All capacitors are in μF unless otherwise noted. pF : μF
 - 50 WV or less are not indicated except for electrolytics and tantalums.
 - All resistors are in Ω and $1/4\text{ W}$ or less unless otherwise specified.
 - Δ : internal component.
 - \square : panel designation.
- Note:** The components identified by mark Δ or dotted line with mark Δ are critical for safety.
Replace only with part number specified.

- $\text{B} +$: B+ Line.
- \square : adjustment for repair.
- Power voltage is dc 9 V and fed with regulated dc power supply from external power voltage jack.
- Voltages and waveforms are dc with respect to ground in color-bar signal input.
- Voltages are taken with a VOM (Input impedance 10 M Ω).
Voltage variations may be noted due to normal production tolerances.
- Waveforms are taken with an oscilloscope.
Voltage variations may be noted due to normal production tolerances.
- Circled numbers refer to waveforms.
- Signal path.
- \Rightarrow : VIDEO (Y/CHROMA)
- \Rightarrow : VIDEO (Y)
- \Rightarrow : VIDEO (CHROMA)
- \Rightarrow : VIDEO (color difference signal)
- \Rightarrow : VIDEO (R. G. B)
- \Rightarrow : AUDIO

- Note on Printed Wiring Board:**
- \circ : parts extracted from the component side.
 - \square : Pattern from the side which enables seeing.
(The other layers' patterns are not indicated.)
- Caution:**
- Pattern face side: Parts on the pattern face side seen from the pattern face are indicated.
- Parts face side: Parts on the parts face side seen from the parts face are indicated.

SECTION 5

EXPLODED VIEWS

NOTE:

- -XX and -X mean standardized parts, so they may have some difference from the original one.

- Color Indication of Appearance Parts

Example:

1
KNOB, BALANCE (WHITE) . . . (RED)

↑ ↑

Parts Color Cabinet's Color

- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Accessories and packing materials are given in the last of the electrical parts list.

The components identified by mark \triangle or dotted line with mark \triangle are critical for safety.
Replace only with part number specified.

SECTION 6 ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms.
METAL: Metal-film resistor.
METAL OXIDE: Metal oxide-film resistor.
F: nonflammable

- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
In each case, u: μ , for example:
uA. . . : μ A. . . uPA. . . : μ PA. . .
uPB. . . : μ PB. . . uPC. . . : μ PC. . .
uPD. . . : μ PD. . .
- CAPACITORS
uF: μ F
- COILS
uH: μ H

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board.
